

List of Posters presented in Greek Stochastics κ'

Tasos Papanikos

Bayesian hierarchical meta-analytic methods for surrogate endpoint evaluation across treatment classes

Dimitris Politis

Nonparametric estimation of the conditional distribution at regression boundary points

Georgios Tsomidis

Investors' Behavior in Cryptocurrency Market

Danai Sarri

PCA and Stochastic Dominance Efficiency Tests: An Empirical Application and Visualization in the Mutual Fund Industry

Zhongzhen Wang

Bayesian Tensor Factorisation of Maximal Order Markov Chains

Tianlin Xu

Training generative latent models by variational f-divergence minimization

Leriu Ilias

Bayesian Survival Analysis under Model Uncertainty using the Generalized F Distribution

Giorgos Vasdekis

ZigZag Process

Pantelis Samartsidis

A Bayesian multivariate factor analysis model for evaluating an intervention using observational time-series data on multiple outcomes

This work is funded by the NIHR Health Protection Unit on Evaluation of Interventions (HPRU)

Panagiota Tsamtsakiri

Bayesian methods for model selection of INGARCH models

Angelos Alexopoulos

Bayesian variable and covariance selection for Gaussian copula regression models

Konstantinos Bourazas

A Bayesian self-starting Shiryaev statistic for Phase I data

Konstantinos Bisiotis

Control charts in monitoring portfolio weights

Marios Kondakis

Development Rate Models in ecology: a Bayesian approach

Anastasia Chatzilena

Bayesian Inference for epidemic models using Stan
